### **DETAILED ACTION**

The Amendments filed on July 2, 2008 has been received and entered.

Currently, Claims 3-4, 40-41 are pending. Claims 3-4, 40-41 are examined on the merits. Claims 1-2, 5-39, 42-50 are canceled.

### ***Election/Restrictions***

Applicant's election without traverse of the species tingling sensate, spilanthol, in the reply filed on Feb. 6, 2008 is acknowledged.

### ***Response to Arguments***

### ***Claim Rejections - 35 USC § 102***

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 3-4, 40-41 are rejected under 35 U.S.C. 102(e) as being anticipated by Nakatsu et al. (US 6780443 B1) for the reasons set forth in the previous Office Action, which is set forth below. All of Applicant's arguments regarding this ground of rejection have been fully considered but are not persuasive.

Nakatsu et al. teaches from about 0.001% by weight to about 10% by weight of a tingling sensate substance (column 10, lines 9-12) of spilanthol, Saanshool-I, Saanshool-II and Sanshoamide, Black pepper extract, which inherently contain alkadienamides (column 3, lines 7-12).

Applicant argues that tingling sensate of spilanthol is not taught.

In response to Applicant's argument, spilanthol is taught (Abstract and column 3, line 12).

Applicant argues that black pepper extract from *Piper nigrum* does not contain the claimed alkadienamides.

In response to Applicant's argument that black pepper extract from *Piper nigrum* does not contain the claimed alkadienamides, the Specification on page 3, last paragraph indicated that the alkadienamides can be extracted from *Piper* species. Black pepper or *Piper nigrum* is a species of *Piper*; thus, black piper would inherently contain a mixture of the claimed alkadienamides.

### ***Claim Rejections - 35 USC § 103***

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 3-4, 40-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakatsu et al. (US 6780443 B1) for the reasons set forth in the previous Office

Action, which is set forth below. All of Applicant's arguments regarding this ground of rejection have been fully considered but are not persuasive.

Nakatsu et al. teaches from about 0.001% by weight to about 10% by weight of a tingling sensate substance (column 10, lines 9-12) of spilanthol, Saanshool-I, Saanshool-II and Sanshoamide, Black pepper extract (column 3, lines 7-11), which intrinsically contain alkadienamides of N-isobutyl-E2, E4, decadienamide, N-isobutyl-E2, E4-undecadienamde, N-pyrrolidyl-E2, E4-decadienamide, N-piperidyl-E2, E4-decadienamide (see Applicant's Specification, page 3, last paragraph). However, it does not teach all of the claimed concentrations.

The reference also does not specifically teach adding the ingredients in the amounts claimed by applicant. The amount of a specific ingredient in a composition is clearly a result effective parameter that a person of ordinary skill in the art would routinely optimize. "[W]here the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation." *In re Aller*, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955). Thus, optimization of general conditions is a routine practice that would be obvious for a person of ordinary skill in the art to employ. It would have been customary for an artisan of ordinary skill to determine the optimal amount of each ingredient to add in order to best achieve the desired results. Thus, absent some demonstration of unexpected results from the claimed parameters, this optimization of ingredient amount would have been obvious at the time of applicant's invention.

Applicant argues that tingling sensate of spilanthol is not taught.

In response to Applicant's argument, spilanthol is taught (Abstract and column 3, line 12).

Applicant argues that black pepper extract from *Piper nigrum* does not contain the claimed alkadienamides.

In response to Applicant's argument that black pepper extract from *Piper nigrum* does not contain the claimed alkadienamides, the Specification on page 3, last paragraph indicated that the alkadienamides can be extracted from *Piper* species. Black pepper or *Piper nigrum* is a species of *Piper*; thus, black piper would inherently contain a mixture of the claimed alkadienamides.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
